**DETAILED ACTION**

***Specification***

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
2. The applicant is requested to provide and update information for references on page 7.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the first data network telephone" in lines 15-16. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2661

6. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bergler (5,646,945) in view of Daswani et al (6,477,565).

Bergler discloses a system comprising: a data network to provide data connectivity for a plurality of data connectivity for a plurality of data communications channel using data transport protocols (see figure 1); a data network telephone (T2) connected to the data network, the data network telephone operable to communicate a voice signal as voice-over-data packets on a voice-over-data channel, the voice over data channel being one of the plurality of data communication channels on the data network, the data network telephone operable to convert voice-over-data packets communicated on the voice-over-data channel to voice signals; and a portable information device comprising a first graphical user interface and a first data network telephone interface, the first graphical user interface operable to accept and display information from the data network, the first data network telephone interface operable to communicate at least one request for services to and from the data network telephone (see figure 1 and col. 1, line 64-col. 2, line 41). Bergler does not specifically disclose Internet service connected to the data network. However, Internet service connected to the data network is well known in the art. Daswani discloses a portable information device (47) connected to the Internet (11) to receive services (see figure 1). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to connect the portable device to the Internet as taught by Daswani in the system of Bergler with the motivation being to receive Internet services that are available in the Internet.

### ***Conclusion***

Art Unit: 2661

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nagatomo et al (6,334,126), Angwin et al (6,477,576), and Nahi et al (6,084,584) are all cited to show a portable device connected to the Internet which are considered pertinent to the claimed invention.
